PREFACE

President
Brenton Heazlewood

Welcome to this edition of the Australian Flock Register. I would particularly like to welcome those breeders who have registered a stud for the first time. I hope your involvement in the stud sheep industry will be both enjoyable and fruitful.

I would like to remind all members that from the 1st of May 2024, applications for stud registration renewal will only be accepted from Ovine Brucellosis accredited free flocks. This means that a copy of your certificate of Ovine Brucellosis free accreditation will have to accompany your flock return. As stud sheep breeders we must be serious about not having Ovine Brucellosis in our flock, or passing this disease on to our customers.

I hope that all the breeding decisions recorded in this register are going to prove fruitful for both the breed of sheep involved and you the breeder.

Face in general form wedge shaped, free of wool and covered with short, white hairs. Lips and nostrils black. Black specks on face and ears not objectionable. Face tending to blue.
EYES	Full sized and bright.
EARS	Medium sized and alert. Black spots not objectionable.
NECK	Medium length, strong and well set into a strong shoulder.
SHOULDERS	Upright and wide over the tops.
CHEST	Breast should be deep and wide.
BACK	Wide and level, well filled up behind the shoulders, giving a great girth, showing thickness through the heart and carrying firm even flesh.
RIBS	Well sprung.
HIND QUARTERS	Full sized and square, showing good deep legs of mutton. Tail well set on, almost level with back.
LEGS AND FEET	Legs straight, well set on and wide apart. Short cannon bones, good upright pasterns, not sloping, and devoid of rust or coloured wool on legs. Hoofs black.
SKIN	Healthy pink colour.
CARRIAGE	Free, active and well balanced.
FLEECE	Dense, free, long, even and highly lustrous; lock medium width, showing small, well-defined wave or crimp from skin to tip, belly well covered. Suggested wool count, 40's–46's (32–38 micron approx).
CONSTITUTION AND GENERAL APPEARANCE	Alert, robust attractive, showing style and character.

Description of a Border Leicester Sheep

HEAD	Medium size, smooth crown, medium width in forehead, full and even down the face to slightly Roman nose, deep through from eye. Line of bottom jaw to correspond in arch shape with Roman nose. Free from wool and well covered with white soft hair, occasionally a black spot will appear, brown spots undesirable.
FACE	Clean-cut showing quality, strong jaw, teeth meeting evenly and not extending beyond the pad, broad nostrils, wide and dark.
EYES	Full and prominent, but mild and placid, with a quiet gentle expression.
EARS	Lively, mobile, thick medium size and semi-erect, white inside and out, well covered with white hair, black spots occasionally appear.
NECK	Medium length, tapering nicely from the head and strongly set in at shoulders.
SHOULDERS	Wide, level with back, with plenty of heart room, no depression behind blades.
CHEST	Broad, deep, well formed, brisket carried well forward.
BACK	Straight, good length, broad with wide flat loin, evenly covered with flesh that is firm to touch.
RIBS	Well sprung, deep body well let down forming good underline.
HIND QUARTERS	Broad square and deep, leg of mutton well let down, tail well set on.
LEGS AND FEET	Medium length, with strong flat bone and squarely set under, well apart and evenly balanced appearance, covered with white hair, free from wool, dark hoofs preferable. Brown or rust spots undesirable. Pastern should be medium length and strong.
SKIN	Pink and mellow to touch.
FLEECE	The fleece should be uniform, 34–38 micron quality and evenly covered with a soft handling lustrous wool, good length of staple with a bold, broad lock, crimp well defined, carrying out well from skin to tip, dense on the skin and should fill the hand well having a weighty feel, free from wastiness or fribbyness on belly line and extremities, with no kemp or coarse fibres running through the fleece. The whole body including brisket, belly, purse and neck should be well covered, in the case of the rams the fleece to be slightly stronger.
CARRIAGE	Evenly and symmetrically balanced at every point it should be free and noble in appearance, head carried boldly and alert showing character, should be able to move freely and carry itself in a gay, majestic manner.
RAMS	Testicles even in size, soft to handle, evenly hung.
COMMERCIAL USAGE	Prime lambs and crossing. Main use in Australia is to cross with Merino ewes; progeny are hornless, big robust sheep, clean points and faces, carrying bulky good quality fleece, good milkers and have ability to finish prime lambs off well; these ewes are mated to Down type rams to breed prime export lambs. When used as prime lamb sires, they produce a heavier type lamb with good skin value. In low rainfall areas where seasons are uncertain, they are used as a dual purpose breed; the lambs finding their way to the fat market in good seasons and carried over into profitable sheep in lean years.

Description of a Romney Sheep

The Australian Romney is a large, dual purpose sheep producing strong, heavy wool and very good lambs, with a large proportion of twins

Crossed with other wool breeds the Romney will produce an ideal prime lamb mother with extremely good wool production

Over a period of time it has proven to be the sheep with one of the strongest constitutions and best feet of any breed in the higher rainfall areas of Australia

CARRIAGE	The Romney is a well balanced, stylish sheep with free movement
HEAD	The head, carried high, should be expressive of quality, character, and sex. A broad forehead, level between the ears, which should be of a good size, thick and felty and free from black spots. A wide poll, well covered with wool, free from kemp with no horns. The eyes should be large, bright and prominent, giving a look of alertness and vigour and the face full, and covered with a soft creamy, downy hair, almost free from wool. The muzzle should be preferably coal black with open nostrils, the jaw wide and strong with teeth meeting the pad correctly
BODY	The neck should be strong and smoothly joined at the shoulders and should be no longer than necessary to preserve the balance of the animal. Shoulders should be well coupled and fit smoothly into the carcass of the sheep, and the blades must not on any account protrude above or even quite reach the top of the vertebrae. A flat heavy shoulder should be avoided
FEET AND LEGS	The feet should be of sufficient size, and so shaped, that the toes will open with the weight of the body and preferably be of black horn, although a streaky foot should not disqualify. The pasterns should be strong and springy, and all legs set at points of perfect balance. The cannon bone should be of sufficient length to maintain adequate height off the ground. Hocks should be strong and set well apart, straight hocks, as with straight pasterns, are very objectionable. Brown or rusty hair on the legs is not acceptable
SKIN	Skin should be a healthy pink, free, soft and thick
WOOL	It is a desirable feature of the Romney that the wool can range from 44's to 50's (30 to 40 microns) for individual strains of sheep. Each has its environmental place, its markets, and each should be grown to suit specific manufacturing needs. The fleece should be dense, but free opening and the staple well defined, full and oval shaped, not flat. In addition to being semi lustrous and soft, it should have the necessary bulk and handle well. Uniformity of covering is essential, and quality should be maintained from the shoulder to the extremities. Weak or wasty back wool is not typical of the breed and is not acceptable

Description of a Southdown Sheep

Firstly the sheep should have good character and appearance

HEAD	Wide, with no sign of slug or dark poll. Nostrils full and wide. Strong lower jaw. Teeth fitting well up on the pad.
FACE	Full, of medium length from the eyes to nose. Hair of soft texture, even mouse colour with no approaching black or speckled. No wool on face below or around the eye.
EYES	Large, prominent and bright.
EARS	Of medium size and thickness, with soft hair covering of similar colour to face, wool cover is undesirable.
NECK	Wide at the base, strong and well set into the shoulders, with as few wrinkles as possible. Throat clean.
SHOULDERS	Well set, level with the back, well covered, not too heavy and allowing free movement, no depression behind the blades
CHEST	Ample width and of sufficient depth
BACK	Long, level and firm with a deep, firm, wide and well muscled loin
RIBS	Well sprung with fore and hind flanks fully developed
TAIL	Broad, almost level with the spine
HIND QUARTERS	(Including thighs) should be full, well let down with a deep wide twist allowing for a deep cut of meat and giving strength to the back leg and freedom of movement
HIND LEGS	Of medium length but strong with thick bone, having a slightly forward setting from the vertical line of the pin bone. Hocks should be thick and strong.
FORE LEGS	The forearm should be strong and thick with meat. The canon bone should be strong and of medium length.
FEET	Should be black with the sheep standing square on. The pastern should be well sprung but not sagging. The legs should have no wool cover below knee or hock. Hair cover should match face colour and not have black or brown above the hoof.
SCROTUM	Good size, well hung, carrying two normally well developed testicles
SKIN	Of a healthy pink not inclined to blue or spotted and should not have wrinkles over the body.
FLESH	Even and firm handling all over
WOOL	Short, dense and of fine texture with no brown wool or fibres. Suggested wool count 25 micron or finer.
CARRIAGE	Free and active, head well carried

It is extremely important to bear in mind that the main object of breeding Southdowns is to provide the best sire for crossing with other breeds to produce the ideal prime lamb. The sheep desired is one with a maximum of meat with sufficient, but no waste fat and attention paid to keeping the weight on the more valuable cuts. Of great importance also is to present a sheep having clear face and legs which is attractive to the buyer.

Description of a Wiltshire Horn Sheep

TYPE AND APPEARANCE

Big framed, lean, well muscled, generally later maturing, horned shedding breed of meat sheep, whose purpose is to produce progeny for optimal prime lamb production, often with lambs more suited to export specifications. Both rams and ewes proud and stately with a certain grandeur of carriage. Rams over 100kg, ewes over 80kg.

HEAD HORNS

Males and females horned. Horn falling back and outwards with uniform graceful curve clear of the head. In the males stronger horn with a second curve, the first part of the first curve should not be rubbing the neck behind the ears, and the inside point of the first curve should not be cutting the face. Ram horns that form a tight first circle obstructing the forward vision should also be penalised. Rams may not be shown with horns cut.

FACE

Pure white in colour, usually with some black spotting, notably on the broad ears. Eyes big and bright and fearless. Nose 'Roman' in profile. Wide nostril with the flesh part of the nose preferably dark.

TEETH

Strong and set into a good strong lower jaw, free from any sign of weakness, and positioned for optimal bite.

NECK

Medium length. In rams wide at the poll and back of ears and gradually enlarging in all lines to a strong full junction at the shoulder as seen from the sides or the bottom. Ewe neck slimmer and more feminine.

CHEST, RIBS SHOULDER

Deep chest with well filled brisket. Ribs well sprung with a full heart girth. Shoulders wide and oblique, should not rise above the level of the back in ewes, and not excessively above in rams.

BACK AND LOIN

Back long and level, well covered with flesh, well-muscled rumps, and good depth of muscle between hind legs. Tail broad and well set up, cut or uncut. If tail is cut it is to have no less than two joints remaining.

LEGS

Fore legs straight and wide apart with no wool. Hind legs full of meat to a well angled hock with good flat bone, with strong pasterns and sound feet with some black pigment. No wool below hock.

SKIN AND WOOL

Skin pink, with a hairy coat, covered for part of year with short wool. Wool of no commercial value, and quality (ranges from fine to coarse) not assessed in show ring. Sheep over one year old shown in Summer to have no wool covering. In Spring sheep may have some wool but be in the process of shedding. In Autumn and Winter sheep have wool on chest, back and sides, but wool not present on belly, underside of chest, head, front legs, lower half of hind legs, or crutch. Sheep under one year may at any time have wool present but not excessive in length or coverage, and there must be some sign of shedding in the summer months. Wiltshires may not be exhibited for show competition subsequent to being shorn. Spotting permitted on head, body and legs, but not be excessive in either numbers or size of spots. Young sheep less spotted than older ones.

Description of a Wiltipoll Sheep

Background

Wiltipoll sheep are a polled large framed lean and well-muscled cleanskin meat sheep developed in Australia in the early 1990s using reliable wool shedding and polled genetics. The Wiltipoll breed has a fleece similar to other short wool meat breeds that fully sheds in spring. Key characteristics of the Wiltipoll that make it a first choice for purchasers looking for an easy care large meat sheep are:

- An established breed with reliable meat sheep performance.
- Complete wool shedding.
- Strong maternal instincts and high lambing percentages.
- Wiltipoll ewes are seasonal breeders; which allows rams to run with ewes at other times.
- High growth rates for lambs including multiple births.
- Calm, intelligent disposition and easy to muster.
- Easy to retain with basic sheep fences.
- Rams are virile, alert and active performers.
- Hardy sheep that thrive in a wide range of Australian climates.
- Excellent feet suitable for all paddock conditions.
- Fully polled (no horns).
- Suitable for organic style operations.

Appearance:

Head

- **Horn sites**
Male: has depressions in the bone of the skull at the horn sites. One or both depressions may contain a keratin scur or bony horn knob not to protrude more than 5mm above the skull profile.
Female: similar to male but with a narrower skull profile.
- **Eyes:** bright and full with dark pigmentation around the outer edge.
- **Nose:** slight Roman profile with dark pigmentation.
- **Ears:** long and broad and not carried erect. May have some minor black spotting.

Neck and Shoulders

- **Neck:** medium length, strong and well set.
- **Shoulders:** well set and oblique. Width of sheep at shoulders to be less than width at rear.

Body

- **Chest:** deep and wide with well sprung ribs.
- **Back & Loin:** Level back. Well filled and muscled loin.
- **Hindquarter:** Well muscled large hindquarter with a wide pelvic area consistent with easy lambing.

Legs, Pasterns and Feet

- **Legs:** Strong and set well apart with an alert well balanced stance.
- **Pasterns:** well angled hock and strong pasterns.
- **Feet:** Dark pigmentation preferred but older sheep will lose some pigmentation from their feet without detriment.

Skin and Wool

- **Skin:** Pink with no black ticking in lambs and two-tooth sheep. Increased black ticking in the skin is normal in older sheep.
- **Wool:** Wiltipoll sheep do not require shearing. They shed their fleece during the spring of their first adult year.

AUSTRALIAN FINN FLOCK HISTORIES

No registered studs since 2021

Description of a Poll Wiltshire Sheep

Poll Wiltshire Sheep are a wool shedding prime lamb breed. The Poll Wiltshire was developed from a natural occurrence in the Byarlea Wiltshire Horn Stud sheep flock.

The Poll Wiltshire breed was developed by using the HornPOLL DNA test from Pfizer Animal Genetics to identify and prove the presence of the pollness gene.

The Poll Wiltshire has short wool which is shed annually in Spring and early Summer. Shedding begins on the neck, chest and shoulders. The Poll Wiltshire is large framed, lean and well muscled, producing sires for crossing with ewes of any other breed or crossbred ewes for optimal prime lamb production. Rams are over 100kg and ewes over 80kg. There is no shearing, crutching or mulesing and they have minimal fly problems.

Poll Wiltshires are low maintenance, easy-care sheep. They are hardy and long lived. The ewes are fertile and have excellent mothering abilities, making for a high lambing percentage. Poll Wiltshires are ideal for organic sheep producers. The meat is top quality and has an excellent flavour.

The Poll Wiltshire has excellent wool shedding characteristics due to having no back crossing. They have the same characteristics as the Wiltshire Horn, without the horns.

THE REGISTERED POLL WILTSHIRE HAS ONLY TWO CLASSES:

Class One

Poll Wiltshires with double poll genes, proven by DNA and Parentage testing and from registered Wiltshire Horn flocks will be accepted as Class One Poll Wiltshire Sheep.

Class Two

Poll Wiltshires with single poll genes, proven by DNA and Parentage testing and from registered Wiltshire Horn flocks will be accepted as Class Two Poll Wiltshire Sheep. It is important to understand the significance of the poll gene which has naturally occurred in the Byarlea flock and why the Poll Wiltshire breed is distinctly different from other Poll breeds developed by cross breeding. The intention is to breed Poll animals from Wiltshire Horn flocks to retain all of the characteristics of the Wiltshire Horn breed in the Poll Wiltshire and therefore no crossbreeding is permitted. All Poll Wiltshire sheep must be bred from registered Class One or Class Two Poll Wiltshires. Only registered Poll Wiltshire or Wiltshire Horn Sheep may be used in breeding programs. No other breeds (in particular African breeds) are permitted and there will be no other Appendix flocks. All registered Poll Wiltshire Sheep must be DNA and Parentage tested and bred from Registered Poll Wiltshire Class One or Class Two or Wiltshire Horn sheep. Otherwise they can only be considered to be **commercial sheep**.

Each stud must include in their breeding program a strategy to reduce the incidence of inbreeding. Continued out crossing to registered Wiltshire Horn sheep is essential.

Description of a Perendale Sheep

Perendale sheep are the progeny of second and subsequent crosses of Cheviot/Romney Cross sheep, i.e. Perendale rams or Cheviot/Romney Cross rams on Cheviot/Romney ewes, or Perendale rams on Perendale ewes. There are certain characteristics which have made the Perendale so popular in New Zealand and Australia as truly easy-care, multi-purpose sheep. The Perendales are:

- Alert and active, hence are excellent foragers and are easy to muster.
- Hardy, survive drought and severe weather conditions better than most other breeds.
- Efficient converters, utilising all feeds including dry, stemmy pastures.
- Excellent breeders, possessing strong maternal instincts. They produce many sets of twins with unassisted lambing and wean a good percentage of strong lambs because of their high survival rates.
- Producers of a fleece of reasonable weight and high yield, bulk and elasticity which is being keenly sought after by many different end-users.

Perendale rams are very active and a ratio of 1 ram to 75 ewes is adequate.

GENERAL APPEARANCE

A medium sized, white-faced sheep showing unmistakable Cheviot ancestry in its open face, the carriage of its head and neck and its ease of movement. Resemblance to its other parent, the Romney, is shown in its weight of fleece and, to a lesser extent, in its size.

HEAD	Strong without being over-large, wide between the eyes and broad in the crown, medium topknot desirable but not essential. Horns not permissible.
FACE	Open, white and free of wool below the eyes. Black spots not permissible unless very minute. Nose should be broad, black and with good open nostrils.
EYES	Dark, bold and intelligent, full of character.
EARS	Medium length, somewhat erect giving an alert appearance, soft to handle. Black spots though permissible are to be discouraged.
NECK	Strong and should hold head well up.
SHOULDERS	Not too heavy, but well-set. Withers can be a little higher than shoulder blades.
CHEST	Wide, with plenty of heart room.
BACK	Because of the withers being a little higher there is usually a slight slope to the tailhead, this is acceptable.
RIBS	Well sprung, with a good length loin.
HINDQUARTERS	Firm and deep, well set to legs.
LEGS	Medium length clean and bone not too heavy. Rust should be avoided.
FEET	Medium size and black.
SKIN	Healthy pink colour.
CARRIAGE	Well balanced, free moving and stylish.
FLEECE	Quality wool within the 32-38 micron range is acceptable for adult sheep; lambs and hoggets produce finer wools down to 28 microns. Staple long and regular over entire fleece. Crimp well defined and even from butt to tip. Colour an attractive chalky-white fleece, showing virtually no luster. Handle soft and bulky, with good density. Free of black fibres, rust, kemp and hair.

AVOID

Abnormally broad and long heads. Heavy or excessive width shoulders and brisket. Short dumpy type of sheep. Pink ears, white or pink nose. Excessively heavy bone and very short cannon bone. Down type or harsh wool. Hairy britch. Weak wool on back. Variation in count throughout fleece. Down on pastern.

Description of a Drysdale Sheep

The Association's aim embodies this statement:-

"No breed of sheep can hope to effectively produce the optimum type of wool desired unless its foundation in terms of constitution, conformation, size, fertility and fleece weight have reached a high standard. These factors are just as important in establishing the Drysdale breed as the type of fibre produced."

Equal emphasis should be placed upon fleece and conformation.

HEAD	Ram – strong, bold and masculine in appearance, open face, wide with broad forehead and strong, bold, well balanced horns with slight topknot. Ewe – has small horns well spaced.
FACE	Clean and white. Black spots undesirable. Nose should be broad with good open black nostrils.
EYES	Bright, intelligent, full of character.
EARS	Medium size, thick and white. Black spots undesirable.
NECK	Medium length and good thickness, well set into shoulders.
SHOULDERS	Not too heavy, well set.
CHEST	Wide, deep with well sprung ribs and plenty of heart room.
BACK	A straight, long, deep line commencing at the shoulder to a mid point over the rump.
LOIN	Well fleshed and deep with good length.
RUMP	Broad good leg of mutton, well let down, with high tail setting.
LEGS	Long, strong boned, white in colour. Pigmented fibres are objectionable.
FEET	Feet should be shapely and perfectly black. A streaky foot shall not disqualify.
SKIN	Healthy and pink.
CARRIAGE	Well balanced active sheep with bold free movement and stylish carriage.
FLEECE	The fleece should be uniform in quality, length and highly medullated throughout. White in colour without lustre and evidence of crimp in fibre. Crisp in handle displaying good bulk with plenty of spring. Approx. 40 micron and high yielding. Particular care should be paid to weak backs and to excessive percentage of kemp in the fleece.

Description of a Charollais Sheep

The Charollais is a terminal sire bred so emphasis on selection should be placed on its excellent fleshing qualities and growth.

The purpose of the breed is to breed rams for crossing with commercial ewes to produce quality meat lambs for slaughter. Easy lambing is an important trait associated with the breed so skeletal structure to ensure this is essential.

Feet, legs, teeth, shoulders should be select to normal sheep breeding standards of excellence.

The Charollais is a wedge shaped sheep. The brisket should slope in line with the neck by not protruding lower.

Fleece should be down type with adequate staple length. A good birth coat is necessary.

Fleece cover to at least the base of the ears.

Black spots and britchy wool should be discouraged.

Head and legs should be free of wool, with a colour range from white to charcoal; bare skin on the face and ears should be discouraged. Bare skin around the anus and vulva is to be encouraged.

Feet pigmentation should be black or as dark as possible.

Description of a Persian Sheep

Breed Summary and Purpose

Persians are small to medium sized self-shedding sheep from sub-Saharan Africa. They have been selected to do well in hot, dry, arid environments and have a number of genetic based physical characteristics not found in any other breed that assist them to do this. In addition they are prepared to walk and forage to find food and are able to maintain condition on mixed herbage much of which would be unpalatable to other breeds. Crossing with European breeds in particular the Dorset Horn (to produce the Dorper) and Romney produces sheep that not only develop exceptional amounts of muscle often on quite poor quality food but are also more heat tolerant. Due to the ability to produce robust heat tolerant individuals when crossed with European breeds, Persians, can to some extent, be regarded as the ovine equivalent of Zebu cattle and indeed share many of their adaptations to heat, namely loose pendulous skin folds, large pendulous ears, localized accumulations of subcutaneous fat, and an increased ability to sweat. They do not require shearing, have a small tail that does not require docking and are virtually totally resistant to fly strike.

Two varieties are recognized, differentiated only by the pattern of colour:

1. Kleur Kop (or coloured head) – a white animal with a coloured head, the colour extending approximately half way down the neck, white extending up the neck or onto the head is a severe fault as is color anywhere else on the body apart from the head and neck.
2. Skilder (or speckled, painted or harlequin) – these animals have a colored head, legs and tail with a white body exhibiting a variable amount of colored flecks or spots. The body should display easily recognizable patches on either sides of the body. In the ideal animal about half the white to be replaced by colored evenly spaced spots of approximately 2-3 cm diameter.

In Australia, in both the Kleur Kop and Skilder varieties the following colors are accepted - red, black, tricolor, black and tan, sable, blue (dilute black), roan (dilute red), blue and roan (dilute tricolor) and self (solid black and red).

Head

In the ram, a strong head and neck, comparatively large with eyes widely spaced. A prominent nose with an unbroken convex curve extending from the top of the forehead to the base of the nostrils in lateral profile. In the ewe, similar to the ram but nose less arched or flat and finer. The dewlap, one of the defining features of the Persian is a large pendulous skin fold extending from between the mandibles. It should be prominent, well rounded, well attached and full. The ears are large and pendulous but in proportion to the head. Loose horn buds acceptable but no horns fixed to the skull.

Conformation

The overall impression should be that of a strong, well-muscled robust animal.

Forequarter - Deep and wide with straight legs, spaced far apart. Chest – wide, deep and rounded. Shoulders – well attached and muscled. The anterior bones of the sternum, in particular the first sternebra or manubrium should be prominent and extend forward between the front legs (but not beyond a line extending ventrally from the base of the ears), and be covered by a large well rounded fat pad. A prominent manubrium is a defining feature of the Persian.

Hindquarter Loin fairly long, wide hips with a square shape, well fleshed outer and inner thighs.

Body Proper – the body should have good depth with well sprung ribs, back straight from shoulders to hips. The rump should be well fleshed with a strong connection to the back. The groin should be held low and well filled.

Tail set

One of the defining features of the Persian. A bulbous subcutaneous accumulation of fat around the base of the tail and extending down to the anus. To be symmetrical and prominent but well supported. An inverted V shaped area of bald skin termed the mirror covers the central fat pad. This area should be well defined and pigmented without spotting. The mirror starts as a point below the tail and widens to about 1/3 the width of the fat pad at its base. The tail (or sambokkie) is small with no independent movement except at its base, is approx. 1cm wide and 12cm long, it extends from the dorsal surface of the fat pad, sits flat at its origin, hangs straight down and extends centrally about half the length of the mirror.

Temperament

A tranquil and stately demeanour. Placid when regularly handled

Hair Covering

Smooth and lustrous without evidence of wool.

204 Flock Histories – Persian

Size

Persians are a small breed of sheep

Ram 50 - 65 kg

Ewe 35 - 50 kg

The defining and unique features of the breed are a large and prominent dewlap, a prominent manubrium and the tail set with its mirror and sambokkie. The variety of colours are also a feature of the breed. It is important however that Australian breeders are not distracted by color. Of the 3 important features that form the basis of selection, namely conformation and structural soundness, markings (ie the pattern or distribution of color on the sheep) and color, color is the least important.

Description of an Elliottdale Sheep

HEAD	Head carried well but not high. Broad between the ears, poll covered with wool but free from kemp. Ewes and rams are both polled. Scurs on rams are not objectionable.
FACE	Cleanly chiselled, covered in short white hair. Teeth meeting evenly and not extending beyond dental pad. Nose black with full open nostrils.
EYES	Full and bright with a quiet, gentle expression
EARS	Medium sized, covered with white hair inside and out, black spots not objectionable.
NECK	Strong, medium length and well set into shoulders.
CHEST	Deep and wide.
SHOULDERS	Well set but not heavy.
BACK	Straight and level with a good, flesh coverage. Tail broad and set high.
RIBS	Well sprung with good length of loin.
HIND QUARTERS	Full and deep with good leg of mutton.
LEGS AND FEET	Medium length, well set and devoid of colour. Good, strong, black hooves as the breed was initially developed for high rainfall areas.
SKIN	Healthy pink in colour.
CARRIAGE	Well balanced, free moving and stylish.
FLEECE	Although bred to be a dual-purpose breed, the Elliottdale's main role is as a premium, specialty carpet wool producer. The fleece is chalky white and coarse, with no evidence of crimp or lustre. A high proportion of the primary fibres are medullated and the fleece grows rapidly, around 250 – 350 mm per annum, requiring two clips per year. Fleece measures around 39 - 41 micron and is high yielding.
